

EE 475 Introduction to Image Processing–Fall 2025 Final Project Report Submission

Due on 25 Dec. 2025, 17:00

Rules:

- If asked, any code must be supported with concise comments for evaluation. Please remember that too many or long comments make the code intractable whereas a code without or too little comments makes it incomprehensible.
 - Please submit the pdf file of your answers to Moodle web page. **ONLY PDF FILES please!**
 - **Any illegible material will not be evaluated.** It is the responsibility of the preparer of the report to present legible and understandable content.
 - **LATE SUBMITTALS/CORRECTIONS will not be accepted!** Please adjust accordingly.
-

1. Please submit your final project proposal following these guidelines:

- (a) A simple cover (no ornaments please) containing the title of the project, the names and id numbers of the student(s) and total word count.
- (b) Total word count is 1000 with the subdivision among the sections listed below left to the student.
- (c) an Introduction section, explaining the motivation and contributions for your work.
A brief literature survey discussion existing methods and what they lack would help out explaining the contribution of the project.
In the Introduction section you need to provide motivation for the reader.
- (d) Methods and Materials Section, explaining what has been done and how, including but not limited to the programming language that will be used, how and from where the data were obtained. Relate the contents to the gist of the Introduction.
Provide your performance metric in this section. Make sure to clearly explain how did you evaluate the performance of your approach/algorithm.
- (e) Results section which should include the outcome of the steps described in Materials and Methods section.
It is ok to report negative or inconclusive results. A negative outcome is also an outcome, the most important aspect is appropriately reporting it with the aim of dissecting the outcome in the Discussion section with future proposals in the Conclusion Section.
- (f) Discussion section which should include a ‘dissection’ of the Results section. Try to use the performance metric to discuss what went favorable and what went wrong, any improvements and/or deficiency when compared to the existing methods.
- (g) Conclusion section which will include the planned future steps with the reasoning behind them which needs to be supported by the Discussion section.
- (h) a maximum of five images are allowed, they need to be inserted into the document in a professional manner, including each having a caption.
- (i) A bibliography section
- (j) An appendix including the code with sufficient comments as usual.

Please make sure that you cite appropriately all the external material.
